

Fig. S3

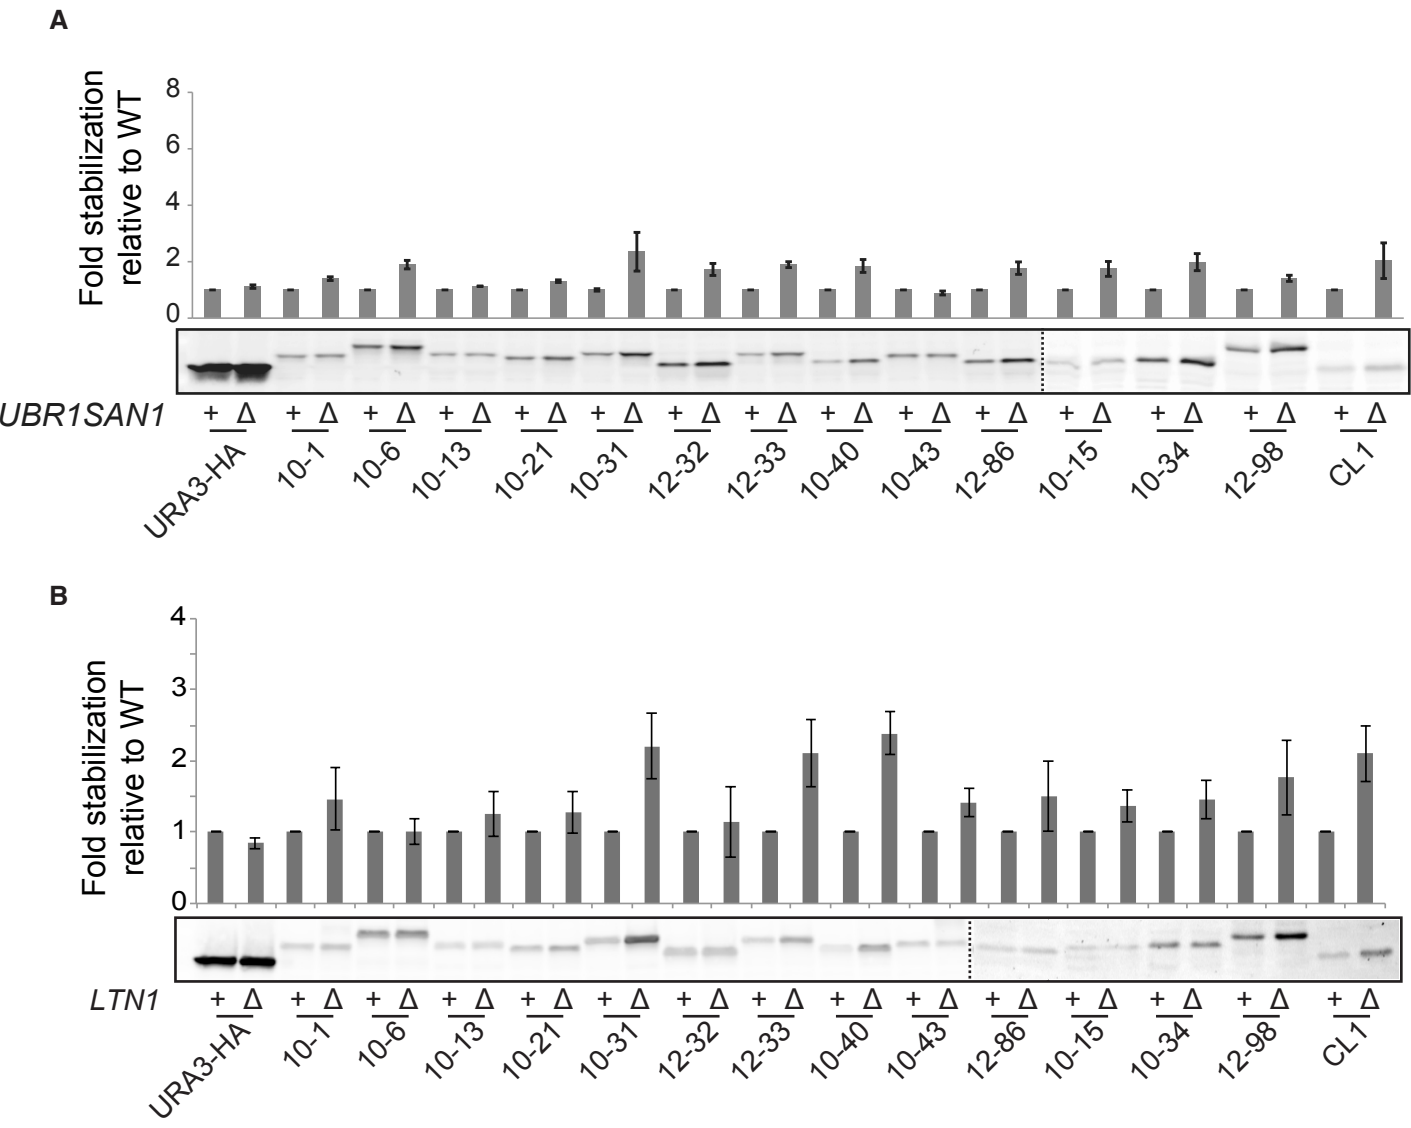

Figure S3. Steady state analysis of Ura3p-HA-degron proteins in the *ltn1* Δ mutant and the *ubr1* Δ *san1* Δ double mutant. Western blots and quantitation of WT (SM4460), *ubr1* Δ *san1* Δ (SM5770) strains were performed as described in the Materials and Methods. Stabilization, when it occurs, is modest (< 2-fold). Quantitation was performed for three separate experiments, with a representative gel shown here. Vertical dotted lines indicate where separate gels are spliced together.
